

From Chaos and Strange Attractors to Quantum Theory

Ervin Goldfain

Abstract

An open debate exists nowadays on how to properly connect chaos theory and strange attractors, on the one hand, and Quantum Field Theory (QFT) and Quantum Mechanics (QM) on the other. We post here a condensed flow chart showing our view of this connection.

Key words: chaos, strange attractors, critical phenomena, Quantum Field Theory, Quantum Mechanics.

Universality in the behavior of Nonlinear Dynamical Systems [1-4]

Approach to strange attractors and chaos [5-7]

Fractals, Multifractals and Fractional Dynamics [8-10]

Critical behavior and scale invariance [11, 12]

QFT as manifestation of critical behavior [10, 13]

QM as subset of QFT in 0+1 dimensions [14]
